PAPER TRADING ONLY

How do I read the stock report indicators?

Seven Steps to Smarter Trading and Investing

Learn the simple steps of active investing using proven stock indicators, trusted by top active fund managers, and used in portfolio management for over 50+ years. These simple yet powerful technical trading tips provide clear tactics for selecting blue-chip stocks to maximize portfolio growth. We've compiled some of the most effective strategies into this free resource.

Jump into the jungle of blue chip stock trading with our streamlined, seven step quick-start strategy for active trading.

Report Disclaimer

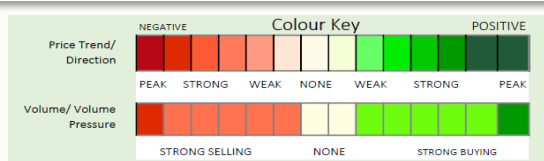

*The educational reports and materials created and provided by **Market Monkey** are intended for educational purposes only and **should not be used for making investing or trading decisions** of any kind. The data presented is delayed (not real-time) and may contain errors. The Market Monkey team does not warrant the accuracy of the data nor agree to update it within any specific timeframes. We are not a financial product advisory service, and Market Monkey does not provide financial product advice. The information provided by Market Monkey consists of numerical data based on publicly available information, user-entered data, or data otherwise available to us. The reports generated are derived from this information using Market Monkey algorithms and Swingvesting © methodology, and commonly used market calculations. This information is neither a recommendation nor a statement of opinion. It should not be relied upon for making investment decisions, and it is recommended that you seek your own independent financial advice before making any decisions regarding your investments. For explainers of this training resource, **visit our [Seven Steps videos](#)** on the Market Monkey website.*

Likely Trend Direction

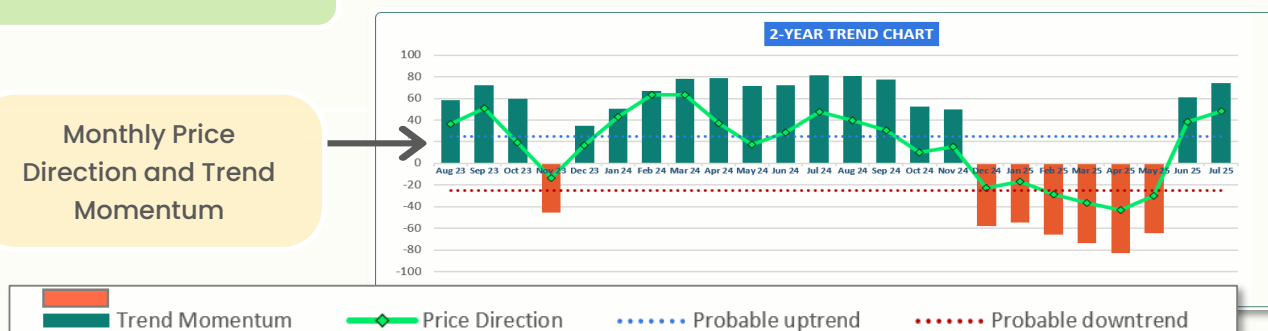

Current 'TIPS' Summary

Price Direction reflects short-term price movement—up (positive) or down (negative). When combined with Trend Momentum, it provides clearer insight into potential shifts in direction and risk. Together, these indicators offer a sharper

Monthly Price
Direction and Trend
Momentum

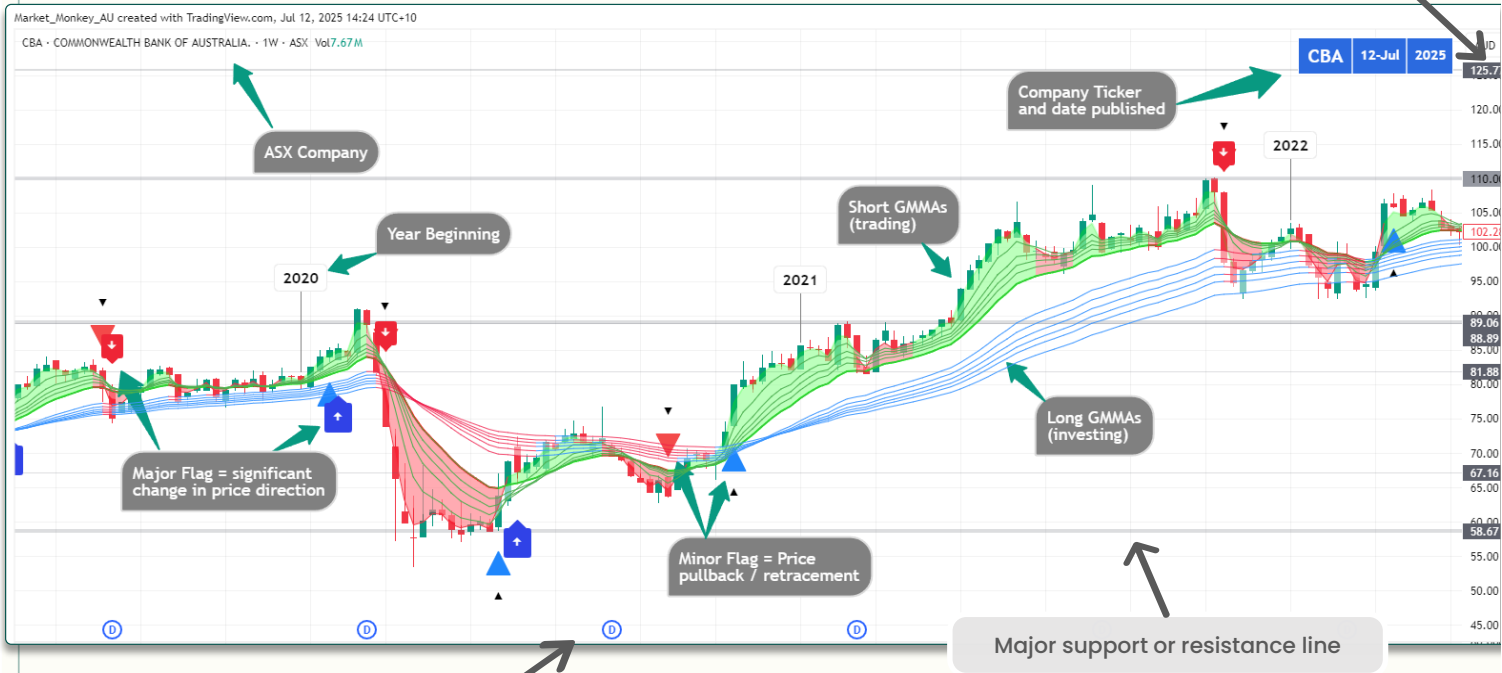

Probability Lines use long-established algorithms to identify likely trend changes. A move above the blue dotted line suggests a probable uptrend, while a move below the red dotted line points to a likely downtrend. When price remains between these lines, the trend is weak or moving sideways—often low risk, but offering little clear direction.

How to read the Weekly Price Charts

Short and long term price chart indicators

Price Range

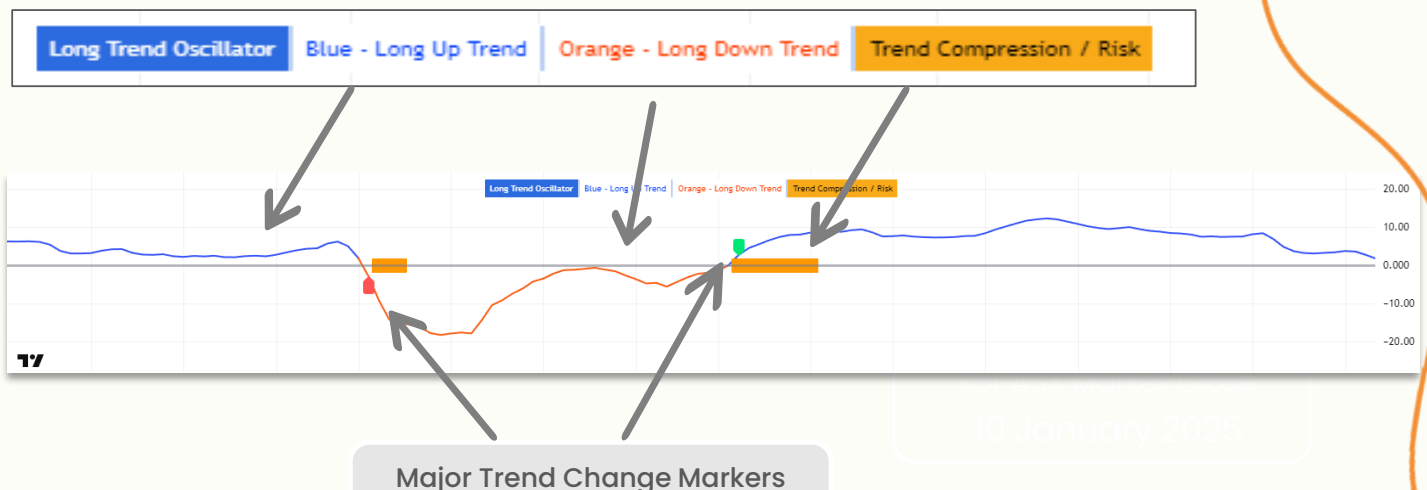

Ex-Div Date Marker

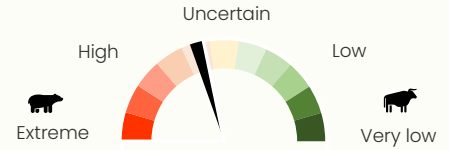

Short-term GMMAs (red and green coloured bands above) use **fast-moving** averages to show what **traders** are doing right now. When they rise or cross above the slower lines (showing green), it suggests short-term bullish momentum. This group reacts quickly, helping spot short-term price movements, and short-term trading entry and exit signals.

Long-term GMMAs (blue lines above) reflect **investor** confidence using slower averages. If they rise steadily, the market may be trending up. As the lines flare apart it further supports trend progression. If they compress it may suggest a slowing trend. These lines offer a broader view, filtering out noise from day-to-day price changes.

The **Long-trend GMMA oscillator (below)** shows when the long term trend direction has potentially changed from bearish to bullish and vice versa. This indicator reacts more slowly, helping spot longer-term movements, and potentially medium to long term investing
