Risk Indicators

Current 'TIPS' Summary

Volume Pressure measures buying and selling strength compared to the stock's 12-month average volume. Weak pressure shows balance, while strong buying or selling signals bullish or bearish sentiment. A drop in volume or high selling volume may indicate a distribution phase and potential trend decline, even in ASX Top 50 stocks.

Trend (Momentum) tracks the strength and direction of the current trend over weeks or months. Sudden peaks in strength, or size (see graph below) may signal a reversal.

Price Direction reflects short-term price movement—up (positive) or down (negative). When combined with Trend Momentum, it provides clearer insight into potential shifts in direction and risk. Together, these indicators offer a sharper

2-Year Trend Chart

Monthly Price Direction and Trend Momentum

Trend Momentum measures the strength and direction of a price trend over several weeks or months. Peaks can suggest a potential reversal. Red trend momentum indicates direction to the downside, while green indicates direction to the upside,

Price Direction reflects immediate movement—positive (up) or negative (down). When above +25, the trend is likely to continue rising, showing strong momentum. When below -25, it indicates continued decline and strong downward pressure.

Probability Lines use long-established algorithms to identify likely trend changes. A move above the blue dotted line suggests a probable uptrend, while a move below the red dotted line points to a likely downtrend. When price remains between these lines, the trend is weak or moving sideways—often low risk, but offering little clear direction.

How to read the Weekly Price Charts

Short and long term price chart indicators

Price Range

Ex-Div Date Marker

Short-term GMMAs (red and green coloured bands above) use **fast-moving** averages to show what **traders** are doing right now. When they rise or cross above the slower lines (showing green), it suggests short-term bullish momentum. This group reacts quickly, helping spot short-term price movements, and short-term trading entry and exit signals.

Long-term GMMAs (blue lines above) reflect **investor** confidence using slower averages. If they rise steadily, the market may be trending up. As the lines flare apart it further supports trend progression. If they compress it may suggest a slowing trend. These lines offer a broader view, filtering out noise from day-to-day price changes.

The **Long-trend GMMA oscillator (below)** shows when the long term trend direction has potentially changed from bearish to bullish and vice versa. This indicator reacts more slowly, helping spot longer-term movements, and potentially medium to long term investing
